The Interns will participate in cross functional projects under the guidance of a designated mentor in an effort to prepare Interns for entering the professional world. Interns will be involved in cross training activities to develop their vision and understanding of processing procedures and goals. This position is designed to expose applicants to real-world experiences and learning in the field of their study.

ESSENTIAL DUTIES AND RESPONSIBILITIES

Participate in projects as designated by mentor to increase understanding of organization operations and to improve process/procedure. May involve team participation and exposure to areas outside of the organization or live operations environment. Participate in educational opportunities such as seminars, Master Farmers Training Program and other ongoing training events. Develop understanding of financial & cost accounting reports, fundraising and finding solutions. Gain knowledge of processes and procedures throughout farm/live operations. Our Interns are expected to contribute to our success through innovative ideas and value creation.

KNOWLEDGE, SKILLS AND ABILITIES

Currently enrolled in a 4 year degree program or graduates. Agriculture, Economics, Environment, Engineering or Business Management is preferred. Intermediate computer skills including proficiency in Microsoft Excel, Word and PowerPoint), good analytical project management and communication (oral and written) skills. (French is an asset).
